## AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

- 22. (CURRENTLY AMENDED) A method for transforming a cell of corn producing a corn plant comprising the steps of:
- (a) co-cultivating an immature embryo from said cell a corn cell with Agrobacterium capable of transferring at least one genetic element to tissue of said cell to produce an infected embryo;
- (b) culturing the infected embryo after said co-cultivation on a medium comprising an antibiotic and a monosaccharide sugar, said sugar being in an amount of from about 5 g/L to about 30g/L;
- (c) culturing a culturing the resulting tissue on a medium comprising a selective agent;
- (d) culturing the resulting tissue on a medium comprising a selective agent to select for transformed tissue;
  - (e) selecting transformed tissue having growing Type II; and
  - (f) regenerating plants from [[said]] embryo structures.
- 23. (ORIGINAL) The method of claim 22, wherein said monosaccharide sugar is selected from the group consisting of glucose, maltose, lactose, sorbitol and mannitol.
- 24. (PREVIOUSLY PRESENTED) The method of claim 22, wherein, said Agrobacterium is taken from Agrobacterium one to two days after rescue from frozen glycerol stocks.
- 25. (ORIGINAL) The method of claim 22, wherein co-cultivation is performed at a temperature of 19° C.

Application No. 09/917,965
Amendment dated Dec mber 29, 2003
Reply to Office Action dated December 30, 2002

- 26. (ORIGINAL) The method of claim 22, wherein a heat shock treatment is applied during co-cultivation, said heat shock treatment comprising a temperature of 35° C to 55° C for 30 minutes to 60 minutes.
- 27. (PREVIOUSLY PRESENTED) The method of claim 26, wherein said heat shock is performed at about 24 hours to about 72 hours after initiation of co-cultivation.
- 28. (PREVIOUSLY PRESENTED) The method of claim 22, wherein the concentration of said antibiotic in the medium of step (b) is from about 15 mg/L to about 75 mg/L.
